

SpecTec Value Proposition

VP Statement

“SpecTec delivers the most trusted and proven maritime asset management and compliance solution - giving fleet owners, operators and managers absolute confidence, predictability, and control across their assets, safety, and regulatory obligations.

AMOS™ enables fleets to operate without surprises by unifying asset management and compliance into one proven digital backbone - built specifically for real maritime conditions.”

AMOS™

What Is AMOS™

AMOS™ is a purpose-built maritime **asset management and compliance solution** - not a generic ERP and not just a PMS.

It acts as the **digital backbone** of fleet operations, combining core asset management capabilities with an open integration framework that allows operators to extend functionality through native modules and trusted partner solutions.

This clarity ensures AMOS™ is positioned around what buyers can confidently justify, defend, and invest in: **control of safety-critical assets and regulatory obligations**, with operational efficiency as a direct outcome - not an abstract promise.

Why SpecTec (& AMOS) Are Different

Trusted. Proven. Tried & Tested

These are not claims - they are facts backed by over four decades of live maritime deployment.

- **Over 40 years of maritime software heritage**
As founders of digital asset management, our operational know-how is unrivalled.
- **Pioneers of digital maritime asset management**
AMOS™ was the first digital system, we're the original innovator, not a follower.
- **Trusted by a significant share of the world's largest, most complex fleets**
Over 40% of the top 20 largest global fleets rely on AMOS™ to manage their assets, compliance, and safety-critical processes.
- **Long-term customer relationships measured in decades, not contracts**
Over 3,000 active vessel deployments across over 300 customers.

AMOS™ is relied upon in environments where failure is not an option - across shipping, offshore, and specialised maritime operations.

Outcome-Led Value | Not Feature-Led Software

You buy AMOS™ based on outcomes, not feature checklists.

- Target to zero unplanned failures and off-hire events
- Predictable, audit-ready compliance across Class, Flag, ISM, and ESG
- Standardised execution across fleets without losing operational flexibility
- Reduced operational risk through traceable, structured data

Operational efficiency, cost control, and uptime are **results of control and standardisation** - not standalone promises.

Built for Asset Management & Compliance

AMOS™ is purpose-built for:

- Asset lifecycle management
- Class, Flag, ISM, and regulatory compliance
- Safety, quality, and audit readiness
- Predictable maintenance execution with zero surprises

This positions AMOS™ clearly beyond generic operations products or ERP-style tools.

Solution, Not Product | How AMOS™ Scales with Customers

AMOS™ is a solution, not a fixed product.

- Core capabilities form the stable foundation (asset management & compliance)
- Open, API-first architecture enables integration with:
 - ERP systems
 - E-procurement providers
 - Performance, fuel, ESG, and analytics tools

Customers extend AMOS™ without replacing their backbone or disrupting operations. This allows fleets to modernise at their own pace.

The top three global maritime ecommerce providers are SpecTec and AMOS™ partners.

Open, Integrated, Interoperable by Design

AMOS™ is not a closed ecosystem.

- API-first architecture supports integration with competitor and third-party solutions
- Full interoperability across finance, crewing, procurement, and other ecosystems
- Designed to future-proof customer technology stacks - not lock them in

AMOS™ increasingly acts as the **system of record** around which other solutions orbit.

Best-in-Class Deployment & Professional Services

Our professional services team is a core differentiator.

- Predictable, phased deployments
- Proven migration methodologies
- Zero operational downtime during implementation
- Deep maritime expertise - not generic IT consultancy

This is why customers trust AMOS™ for mission-critical environments.

The AMOS™ Value Pillars

Proven Reliability That Keeps Fleets Moving

Stable, predictable performance in real maritime conditions - including low bandwidth and remote operations.

Maritime Knowledge Embedded in Every Workflow

ISM, Class, and Flag aligned workflows reflecting how ships and shore teams actually work.

Total Fleet Control at the Best Long-Term Cost of Ownership

Unified visibility, standardised execution, and lower lifecycle cost without ERP complexity.

The AMOS Value Wedge: AMOS™ is the only maritime asset management platform proven over four decades and 3,000+ live vessels to deliver governance-grade asset control and compliance at global fleet scale.
